

MODULE 10.2 DATABASE

**ELVIA GISELLA ADAIR
STUDENT**

PROFESSOR LEWIS

MAY 17TH 2026

Assignment:

Follow the directions below:

- Write a program that views and updates fan information stored in a database titled "databasedb", user ID titled "student1" with a password "pass".
- The table name is to be "fans" with the fields of ID (integer, PRIMARY KEY), firstname (varchar (25)), lastname (varchar(25)), and favoriteteam (varchar(25)).
- Your interface is to have 2 buttons to display and update records.
- The display button will display the record with the provided ID in the display (ID user provides).
- The update button will update the record in the database with the changes made in the display.
- Your application is not to create or delete the table.
- To work on this using your home database, you can make the table and populate it.
- When the application is tested, the table will already be created and populated.
- Write test code that ensures all methods and the interface functions correctly.

SQL File 4* x

Limit to 1000 rows

```
1 SELECT * FROM fans;
```

Result Grid

	ID	firstname	lastname	favoriteteam
▶	1	John	Smith	Eagles
	2	Maria	Lopez	Yankees
	3	David	Brown	Lakers
*	NULL	NULL	NULL	NULL
